

Print Tracker Releases Version 5.0.1 with New ePortal and eLearning Access

Dateline – Boise, ID, USA

PrintTracker™ is proud to announce the addition of the following new features to its software:

- **PrintTracker™** version 5.0.1 supports gathering meters and status information from devices using Simple Network Management Protocol (SNMP) version 3. High security environments with security restrictions regarding the use of versions 1 and 2 can have full discovery and monitoring capabilities.
- The **PrintTracker™** ePortal tool allows designated users access to the on-line viewing of installations, meters, and service information. This information is now readable from both smart phones and all on-line computer users without the installation of **PrintTracker™** software. Salespeople, technicians and users can have quick access to device meter and status information prior to site and service call visits.
- Account Managers can now designate what **PrintTracker™** tools can be accessed by specific users. A dealer's **PrintTracker™** administrator can give Meter Viewer and Service Information Viewer access, with or without editing rights, to both staff and end customers. This new permissions capability adds a level of security to who can have access to the ePortal and other sensitive data.
- The **PrintTracker™** eLearning page on the <http://PrintTracker.net> website now boasts a library of over 100 helpful documents and videos to help users get the most of **PrintTracker™** software. The eLearning page is accessible by **PrintTracker™** clients and registered prospects. The web page includes links to product user's guides, security and confidence documents, print management 'Best Practices', product information, and 'How To' guides for software installation and management.

Lance Hale, President of **PrintTracker™**, discussed the new features in keeping with the company's "**Simple. Smart. Solutions. Service.**" philosophy. "Our partners around the world were the driving force in bringing the ePortal to market. Users in Australia, Brazil, Europe, Japan, and South Africa, as well as those here in the US, now have easier access to more data than ever before. The ePortal is very intuitive to use."

PrintTracker™ is an MPS software solutions company. **PrintTracker™** Pro is a simple-to-install, intuitive-to-use software solution for the imaging device industry. A free trial of **PrintTracker™** software can be downloaded from their website at <http://PrintTracker.net>. Visitors to the site can review the Products and Partners pages; see Testimonials; access FAQs, White Papers, and the Privacy Policy; and see a comprehensive list of supported devices. Print Tracker Sales and Support can be reached by calling (866) 629-3342.
