

Print Tracker Makes it Easy to Transition from Other Solutions

Dateline – Boise, Idaho, USA

Adding to its multiple deployment options, Print Tracker is pleased to announce the new 'Customer List Import' feature that makes it easy to transition from other solutions. With One-Click, USB key, Custom Deployment Link, command-line and now site export/import features, a dealership can more easily implement Print Tracker to gather meters, supply information, and service alerts.

"When dealers contact us and are transitioning from other solutions, they want an easy way to do complete deployments," said Print Tracker Marketing Director Brian Dawson. "The Customer List Import feature is an excellent tool to track progress."

The Customer List Import feature populates the Print Tracker customer list with the dealer's customer list, which then serves as a placeholder or reminder to let dealers know of customers or locations where deployments still need to occur. Combined with One-Click deployment, customers can be sent site specific deployment steps via email to quickly get Print Tracker monitoring their fleet.

The Customer List Import comes as a standard feature in the Print Tracker Admin utility. A user's guide and best deployment practice information are available via the Print Tracker eLearning and blog websites.
